Air Wireless Network
Share Your USB Printer Wirelessly

Features and Benefits

Built-in 802.11b Compliant Wireless

The DP-311U is an 802.11b compliant wireless Print Server with one USB version 1.1 port. With the DP-311U you have the ability and convenience of sharing a printer beyond the wired network infrastructure. DP-311U can use both infrastructure or Ad-hoc wireless modes.

Fast Ethernet Speed

The Fast Ethernet connections support wired throughput speeds of either 10 or 100 Mbps making them compatible with virtually all personal computers.

Easy To Set Up

The DP-311U is easy to set up and configure through your standard web browser application (Internet Explorer, Netscape Navigator, or similar) from anywhere on your network. The configuration menu can be password-protected for added security. The DP-311U also includes a Windows-based administrative program (PSAdmin)* making it possible to set up the print server in your network in just a matter of minutes. The DP-311U also offers an LPR client for Windows 95/98/Me TCP/IP printing.

Easy-to-Read LEDs

The DP-311U's front display panel features an array of diagnostic LEDs (power, link/activity, WLAN and USB). These LEDs will indicate the status of your network and the availability and activity of the printers attached to the print server.

Cost-Effective Printer Sharing

Now others in your home or office network can share your wireless or USB printer without the need to purchase additional printers for their individual workstations. Documents will also print faster from the DP-311U than from a stand-alone computer/OS-based print server or file server.
